/King Y. Poon/ Supervisory Patent Examiner, Art Unit 2625			

Continuation of 11. does NOT place the application in condition for allowance because: the finally rejected claims are still deemed unpatentable over the art of record and applicant's arguments are not persuasive for the reasons set forth in the final rejection and/or explained below.

Regarding the argument that Kloosterman merely discloses that content data is identified. Kloosterman does not teach or suggest how to recognize content data. Furthermore there are various different and distinct methods and processes for identifying content data. Examiner disagrees. There may exist several different and distinct methods and processes for identifying content data, however if the method and/or process is not a new or improved process and still provides predictable results, then the method/process is not patentable. It would have been obvious to try the finite number of different methods in which to identify data to generate the predictable outcome as claimed. Futhermore, Kloosterman explicitly discloses that the "content data...is...explicitly identified". In order for data to be "explicitly identified" there must exist some attached identifier.

Regarding the argument that the identifying data is attached to the image data by the printing information output unit, it is clear from the dsiclosure of Kloosterman that the apparatus which provides the identifying data to the content data would be the information output unit which provides the data to the output device (i.e. printer).

Regarding the argument that the "documents" disclosed in Skordin are completely different from the fixed image data as recited in claim 2, Examiner directs Applicant's attention to the rejection of claim 2 and the answer to arguments for this particular subject matter as recited in the Final Office Action dated 05/08/2009.

Regarding the argument that the page number zero of claims 6 and 7, is used for both identifying the fixed image data and for determining whether the image data should be stored in the storage portion and that this would not be obvious because most documents have no page number zero in document data, Examiner disagrees. Merely identifying a document by any page number within the numerical system would obvious to one of ordinary skill in the art. Simply identifying the page number as "zero" provides no new function or unpredictable result which would warrant patentability. Furthermore, merely choosing a page number which is seldom chosen when numbering pages does not lead to any unexpected result within the context of the claimed invention as opposed to the prior art of record.
